

Random Number Generator Certificate

Operator: Skill on Net

URL: www.BGroom.com

This is to certify that [iTech Labs](http://www.ittechlabs.com) have evaluated the Random Number Generator (RNG) used for the backgammon games by Skill On Net and found that the RNG complies with the relevant iTech Labs standards*.

The Skill On Net RNG for Backgammon games uses a widely recognized algorithm to generate the random numbers. The numbers generated by this RNG have passed Marsaglia's "diehard" tests for statistical randomness.

iTech Labs have also evaluated the scaling of the RNG generated dice numbers. Chi-squared tests were applied to several large sets of numbers for single die and pair of dice. iTech Labs have found that the dice numbers are unpredictable and non-repeatable.

The certified code for the RNG has been fingerprinted.

* A high level description of iTech Labs Technical Standards is available at http://www.ittechlabs.com.au/gaming/iTech_Labs_IGS_Standards.pdf

Disclaimer.

While it is not possible to test all possible scenarios in a laboratory environment, iTech Labs have conducted a level of testing appropriate for a component test of this type.
